Delivery Sprint 1

Sprint Goals

Develop the first few User Stories to create a foundation for the learning outcomes.

Sprint Achievements

- Integrate MongoDB database in local environment
- Run local environment with one bat script
- React front end components and pages
- First REST call from front end to back end

Project Link

GitHub: https://github.com/SjorsScholten/FoodForThoughts

Documentation

Documentation can be found in the project folders under `docs`

CI/CD

There is currently only a CI pipeline active for the backend services, they build each service individually on push or PR.

[Later Additions: - add publish to docker hub - add SonarCloud code coverage - add Test runs - add frontend building]: #

Planning Next Sprint

- Add authentication and authorization
  - As a User, I want to create an account, so I have an account to upload posts
  - As a User, I want to log in with my account to gain authorization to upload posts
- Further development on last sprint user stories
  - As a user, I want to search accounts
  - As a user, I want to search posts
